1.1 Interface and accessory appearance

The series adopts industry-standard, fully enclosed, all-aluminum structure design, thermal performance, with a dustproof, radiation protection, anti-electromagnetic interference function, and beautiful appearance.

Pic. 1-1-1 Product appearance

Pic.1-1-2 Interface diagram

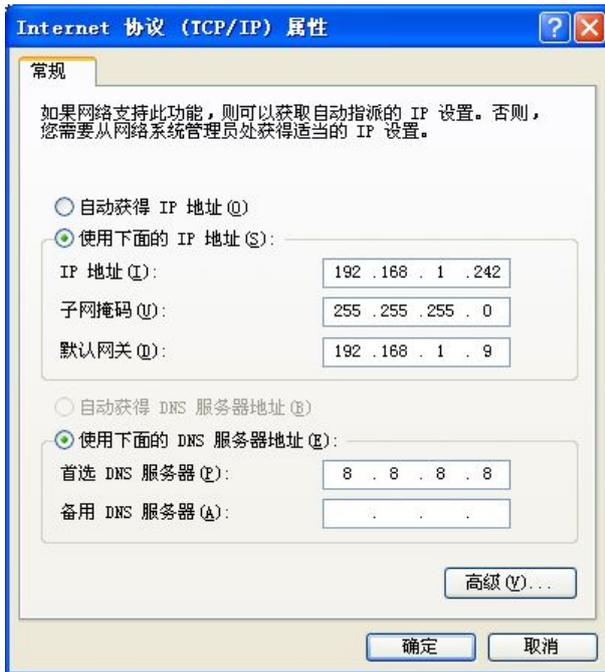

Pic. 1-1-3 Product accessory

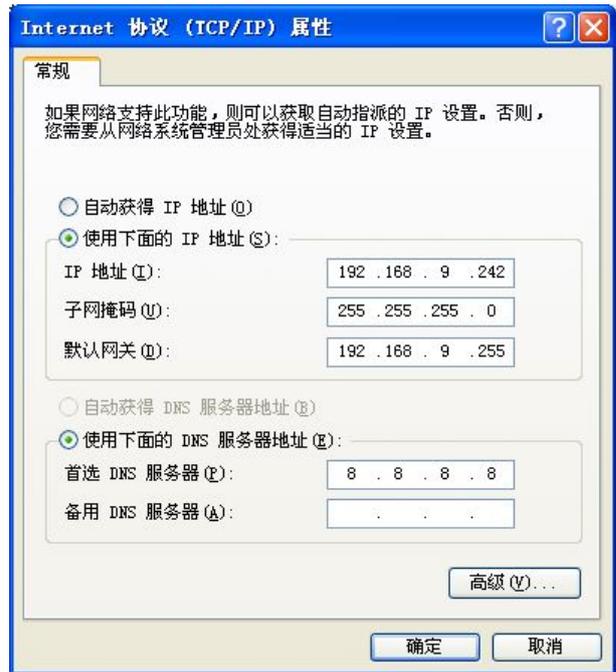

When you get the device, first set all cable like pic. 1-1-2, then connect the device to the computer with a network cable or the equipment and computer lines respectively connected to the same router. After power supply, follow these steps to complete setting before first use

1.2 Local network connect configuration

Default Gateway 192.168.9.255, IP address same with gateway, as pic. 1-2-2 showed.

Pic. 1-2-1 Before local network
connect configuration

Pic 1-2-2 After local network
connect configuration

1.3 Login configuration

Open IE (Suggest up IE6.0), put: <http://192.168.9.1> in Address bar, which is the factory default IP address,system prompts login like pic. 1-3-1

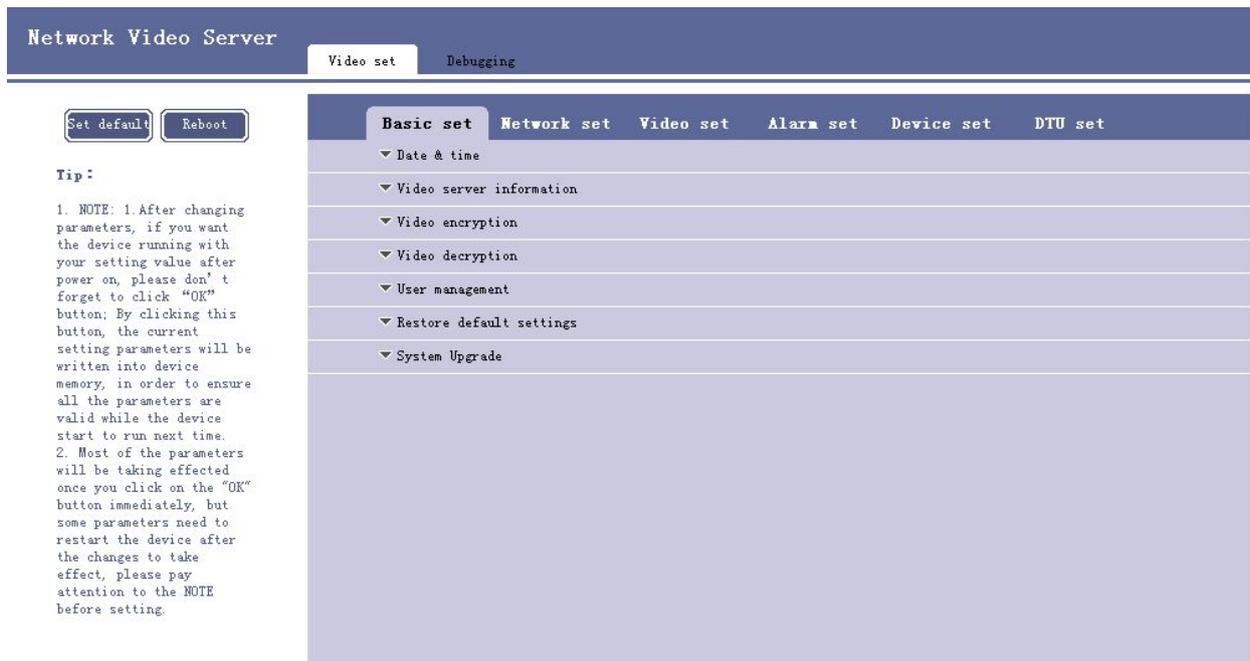

Pic. 1-3-1 WEB Login

The default user name and password;

user name: caimore password: caimore

Enter WEB parameter configuration main interface, like pic. 1-3-2. There are 6 Video configurations and system debugging features: Basic configuration, network parameter, video parameter, alarm parameter, front-end parameter, DTU parameter

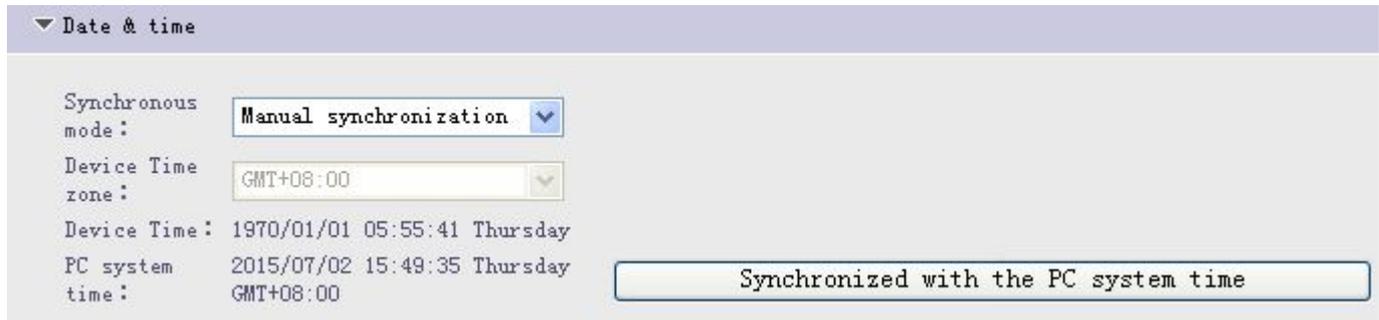

Pic. 1-3-2 WEB main interface

◇ **Notice:**

Most parameter take effect whrn you click “OK”,but some parameter need to restart the device ,when you setting it please notice the word . Restart the device please click

1.4 Date and time setting

Pic. 1-4-1 Date and time setting

Click【Synchronized with the PC system time】, make device time consistent with the PC system time.

1.5 Network parameter configuration

Configure network parameters is provided to enable the device to connect to our server, complete the following configuration.

1.5.1 Video server configuration

The device supports 3G / 4G wireless networks and wired networks three access ways to real-time view video and Recording. Users choose the corresponding mode in "Network preference" item according their requirement .For further convenient configuration , please set the device IP address same to computer,same gateway with The IP address option to set the device to the local computer in the same segment of the IP address, gateway and PC Default Gateway . **(IP address and default gateway is the IP address and default gateway before local network connection configuration .)After that you just put in “http://IP after configuration”when you login .**

For example :

IP address :	<input type="text" value="192.168.1.163"/>	Port :	<input type="text" value="1591"/>
Subnet mask :	<input type="text" value="255.255.255.0"/>	Gateway :	<input type="text" value="192.168.1.9"/>
MAC address :	<input type="text" value="c2:cf:fa:ec:d0:5b"/>		
Network latency Sleep Time :	<input type="text" value="10"/> Second		
Network preferences :	<input type="text" value="3G"/>		
Enable the routing function or not :	<input type="text" value="No"/>		

Note: After modifying parameters, please restart the device.

Pic. 1-5-1 3G Wireless network setting

IP address :	<input type="text" value="192.168.1.163"/>	Port :	<input type="text" value="1591"/>
Subnet mask :	<input type="text" value="255.255.255.0"/>	Gateway :	<input type="text" value="192.168.1.9"/>
MAC address :	<input type="text" value="c2:cf:fa:ec:d0:5b"/>		
Network latency Sleep Time :	<input type="text" value="10"/> Second		
Network preferences :	<input type="text" value="4G"/>		
Enable the routing function or not :	<input type="text" value="No"/>		

Note: After modifying parameters, please restart the device.

Pic. 1-5-2 4G Wireless network setting

IP address :	<input type="text" value="192.168.1.163"/>	Port :	<input type="text" value="1591"/>
Subnet mask :	<input type="text" value="255.255.255.0"/>	Gateway :	<input type="text" value="192.168.1.9"/>
MAC address :	<input type="text" value="c2:cf:fa:ec:d0:5b"/>		
Network latency Sleep Time :	<input type="text" value="10"/> Second		
Network preferences :	<input type="text" value="WLAN"/>		
Enable the routing function or not :	<input type="text" value="No"/>		

Note: After modifying parameters, please restart the device.

1.5.2 Flow server configuration

▼ Flow media server

Server IP:	<input type="text" value="120.26.120.149"/>
Sever port:	<input type="text" value="20086"/>

Note: After modifying parameters, please restart the device!

Pic.1-5-4 Flow server

Flow server IP: 120.26.120.149

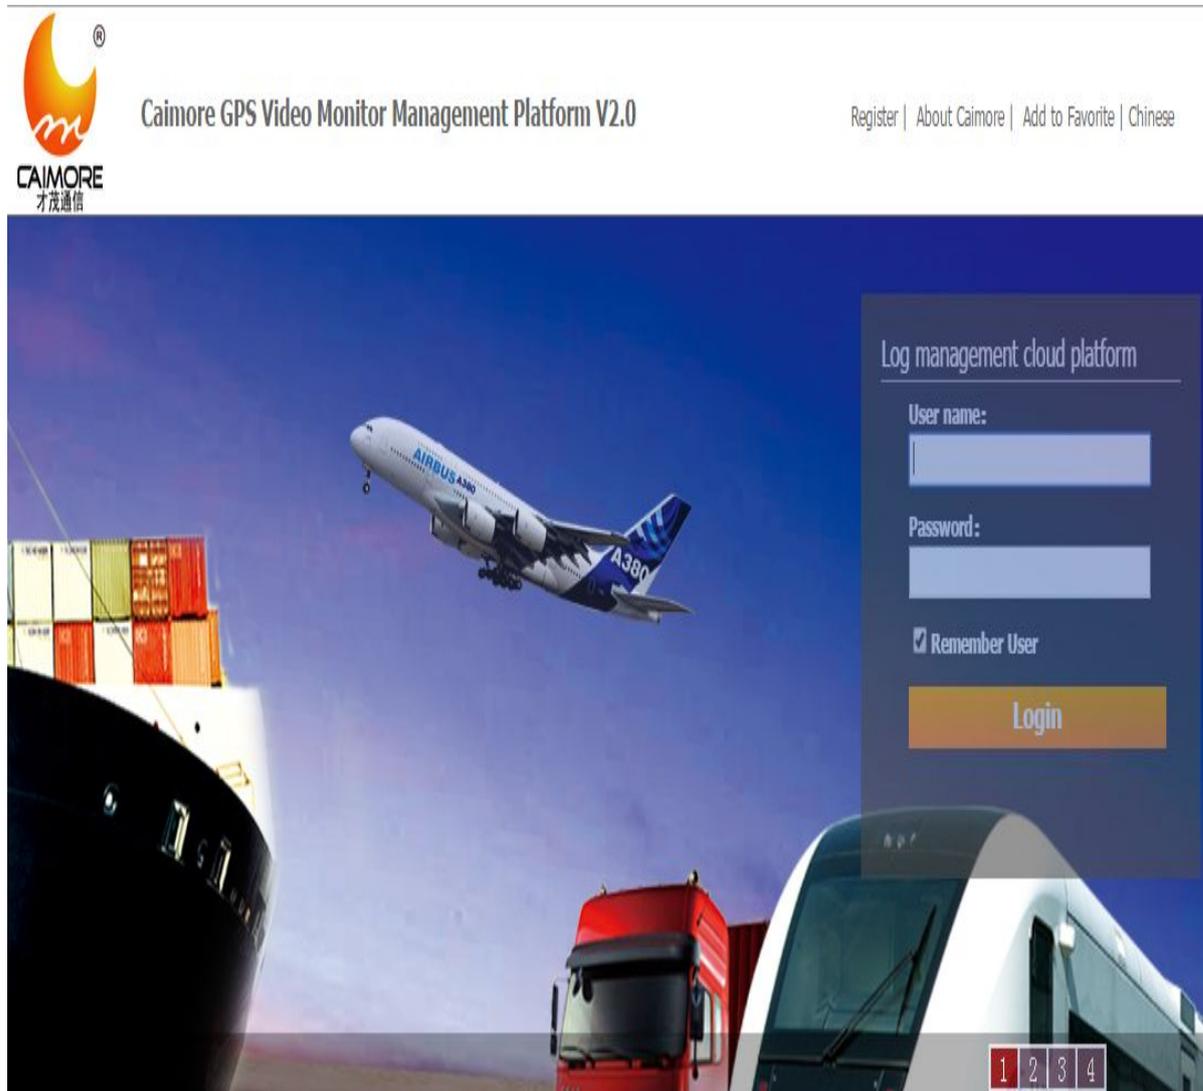

Server port: 20086

The default server address and port of the Company, factory set up already , do not change!

1.6 View video on the platform

1.6.1 Login vehicle video GPS CMS

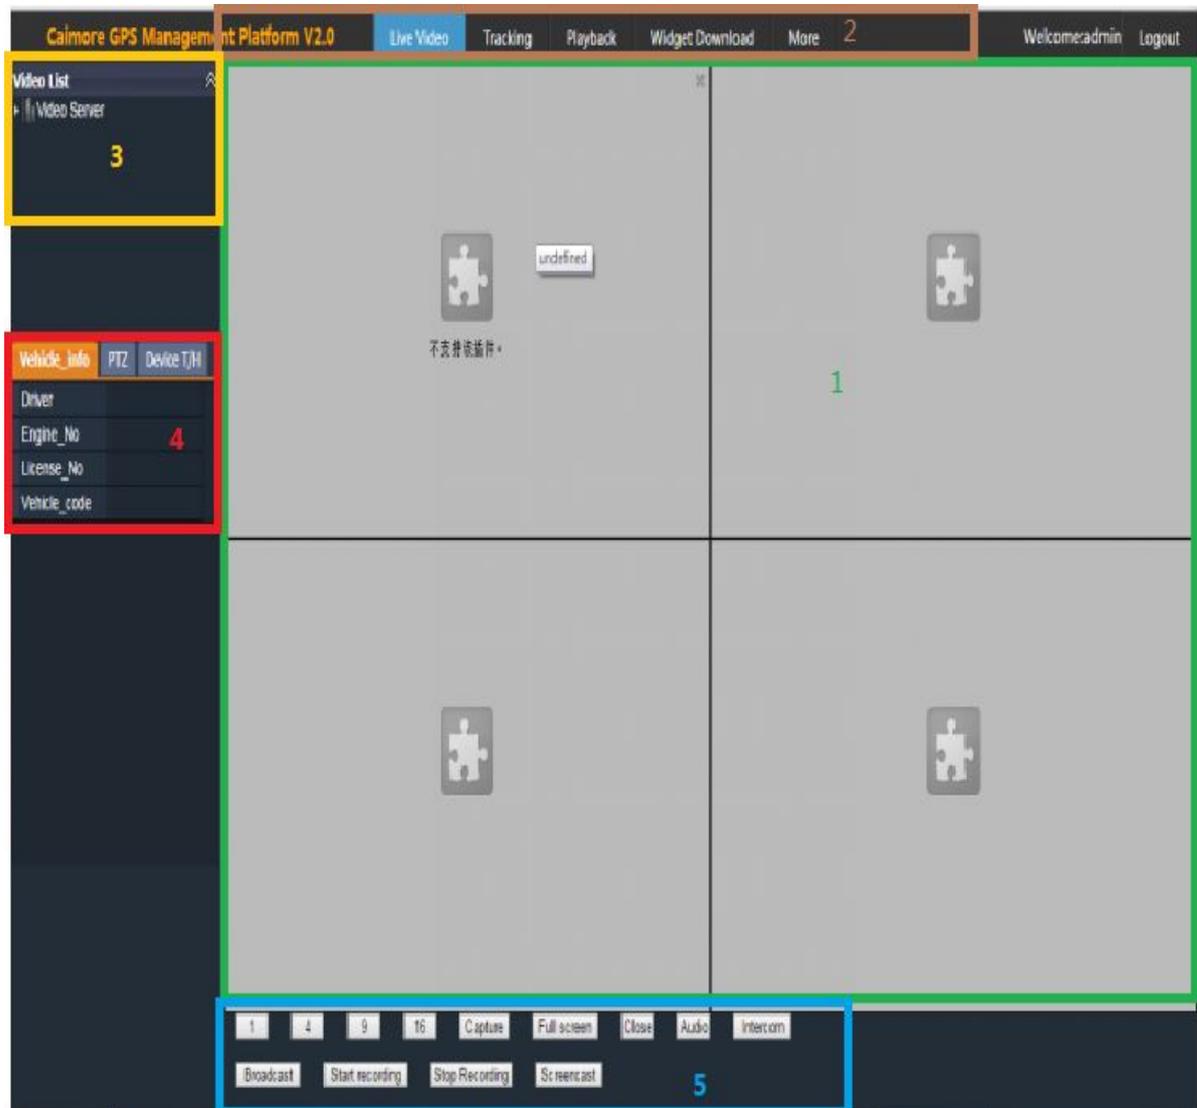

Type : <http://120.26.120.149:8040/> in the browser,enter CAIMORE vehicle video GPS CMS ,
120.26.120.149 is server address, 8040is port number, as picture 1-6-1 showed:

Pic 1-6-1 CAIMORE Vehicle video GPS CMS

Use ID and PWD (Default as admin)(Default as admin)to login. After that,you can see page as

Pic1-6-2 showed:

Pic 1-6-2 Page

Pic 1-6-2 has:

- 1、Display : video display. (marked in green)
- 2、Menu: browser mode. (marked in brown)
- 3、Video List: front end device list. (marked in yellow)
- 4、Function panel: vehicle info、PTZ and device temp and humd etc. (marked in red)
- 5、Tool button: Application function button. (marked in blue)

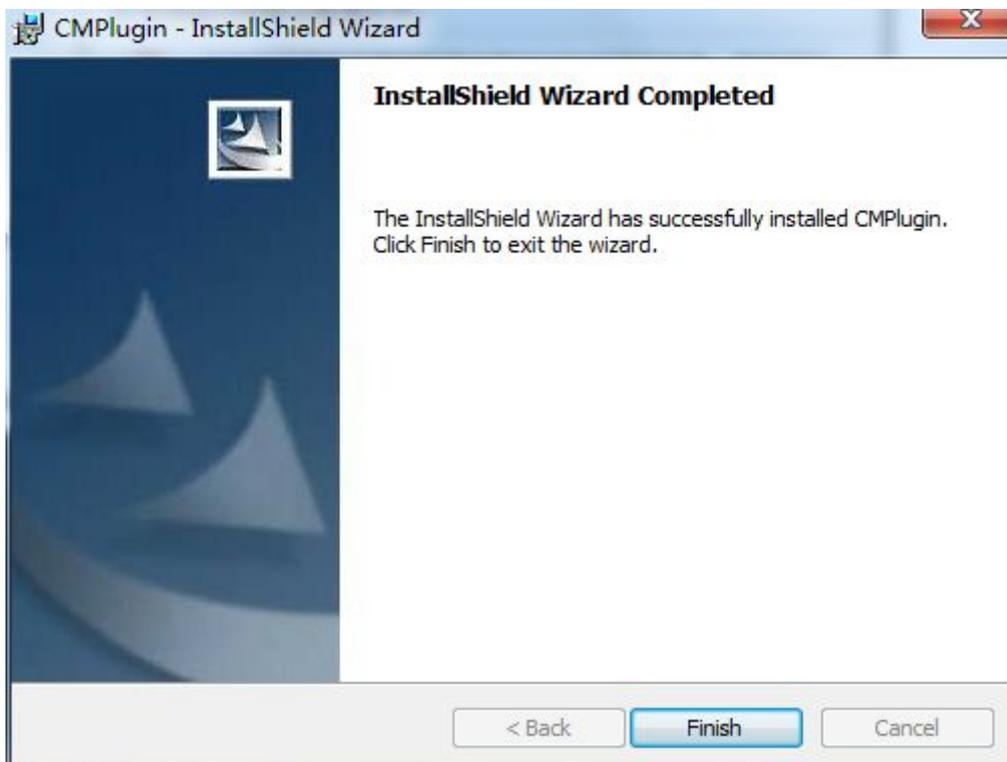

1.6.2 Download&Install plugins (For the first time)

Click **【Widget Download】** to download plugins, after download there will be one pop up to inquire whether to run this software. Pic 1-6-3 showed:

Pic 1-6-3 plugins run inquiry

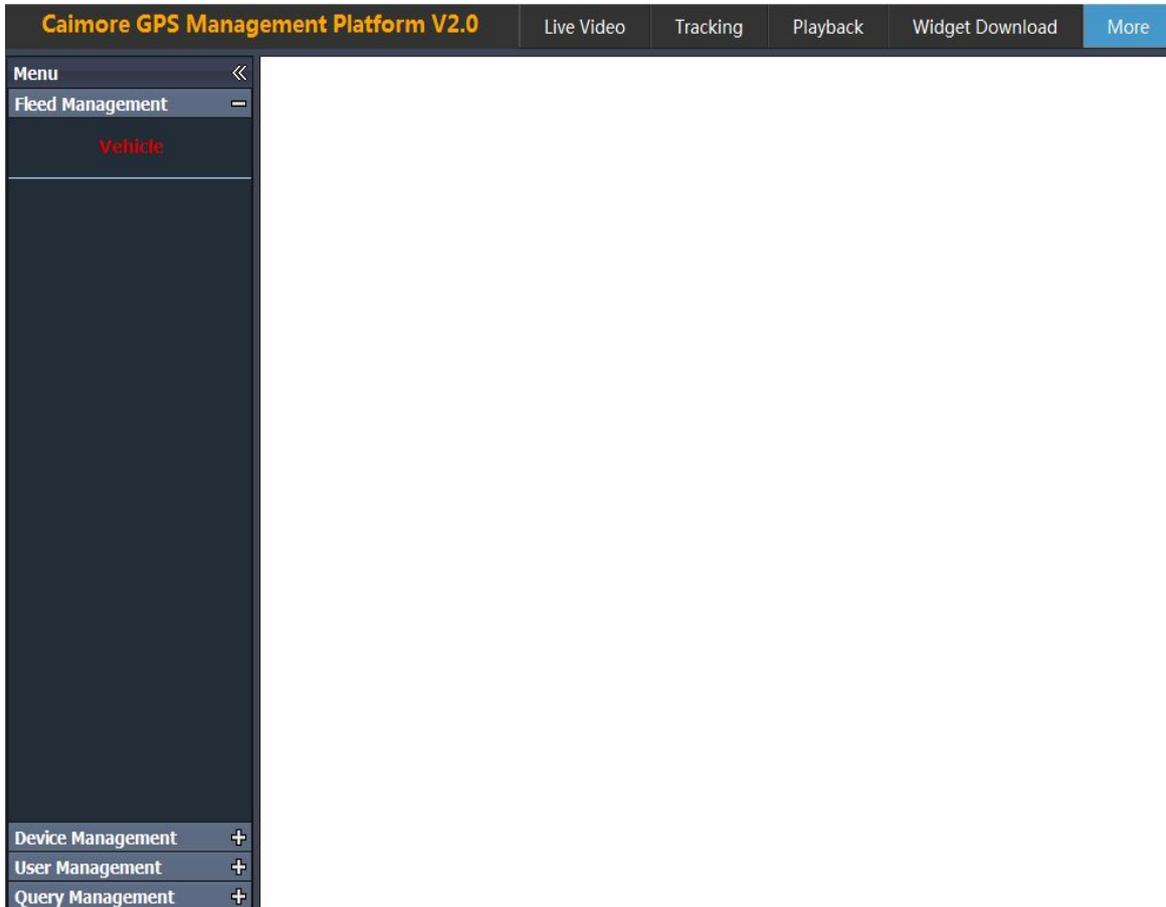

Click **【Run】** button on the plugin run inquiry to install plugins, installation completed tips, Pic1-6-4 showed:

Pic 1-6-4 Installation Completed Tips

1.6.3 Add video server

1) Click **【More】** button in the menu to enter, Pic 1-6-5 showed:

Pic 1-6-5 More Page

2) Click **【Device Management】** button to enter into Device Management list, Pic 1-6-6 showed:

Pic 1-6-6 Device Management List

3) Click **【Device Servers】** button to enter grouping, Pic 1-6-7 showed:

Pic 1-6-7 Grouping

4) Click **【Video Server】** button to enter into video server, Pic 1-6-8 showed:

Fleed management

2 CM_1618	Default grouping	192.168.1.109	1618	80	Is using	Offline	Modify Delete Channels Forward	
3 CM_1635	Default grouping	192.168.1.108	1635	80	Is using	Offline	Modify Delete Channels Forward	
4 CM_0091	Default grouping	192.168.1.91	2091	80	Is using	Offline	Modify Delete Channels Forward	

Pic 1-6-8 Video server

5) If the device existed, click **【Live Video】** button to view real time video, if the device not existed, click **【Add】** button to add video server, Pic 1-6-9 showed:

Video Server Form ✕

Belonged: Name:

Type: NO:

Fixed IP: IP Address:

Signaling Port: Media Port:

User Name: Password:

Remark:

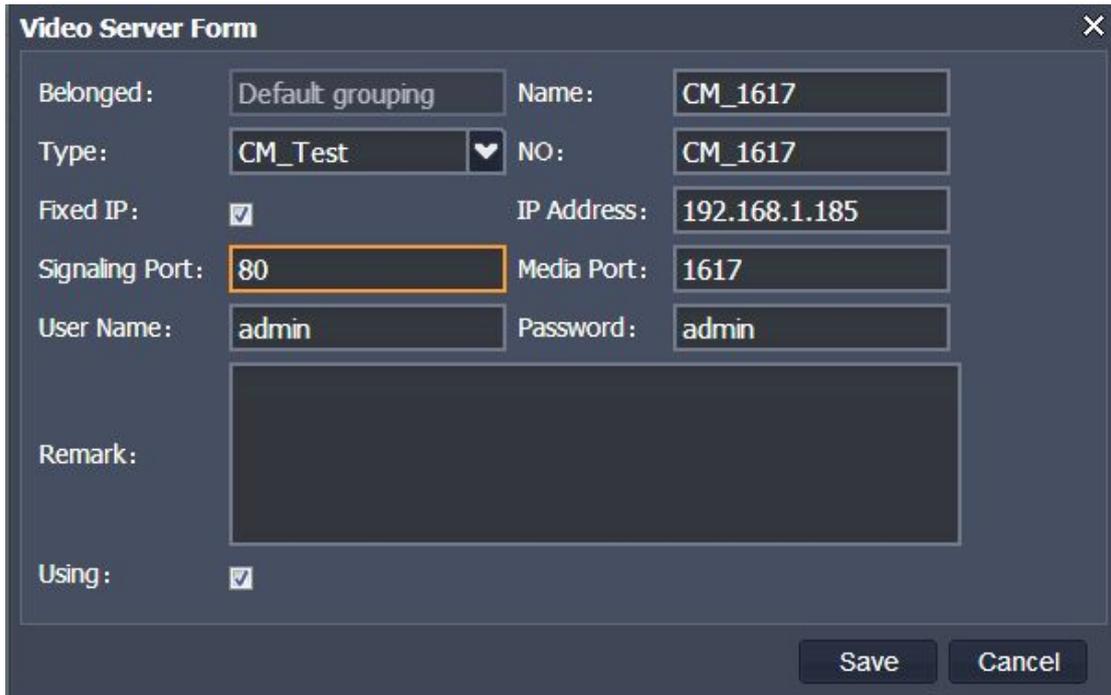

Using:

Pic 1-6-9 Add video server

- Name: Fill in device ID;
- Type: Select CM_Test;
- NO: Fill in device ID;

- IP Address: Fill in device IP
- Signaling Port: Fill in 80;
- Media Port: Fill in device port No.;
- User Name: User-defined;
- Password: User-defined;

For instance: Fill in the content as Pic 1-6-10 showed:

Belonged:	Default grouping	Name:	CM_1617
Type:	CM_Test	NO:	CM_1617
Fixed IP:	<input checked="" type="checkbox"/>	IP Address:	192.168.1.185
Signaling Port:	80	Media Port:	1617
User Name:	admin	Password:	admin
Remark:			
Using:	<input checked="" type="checkbox"/>		

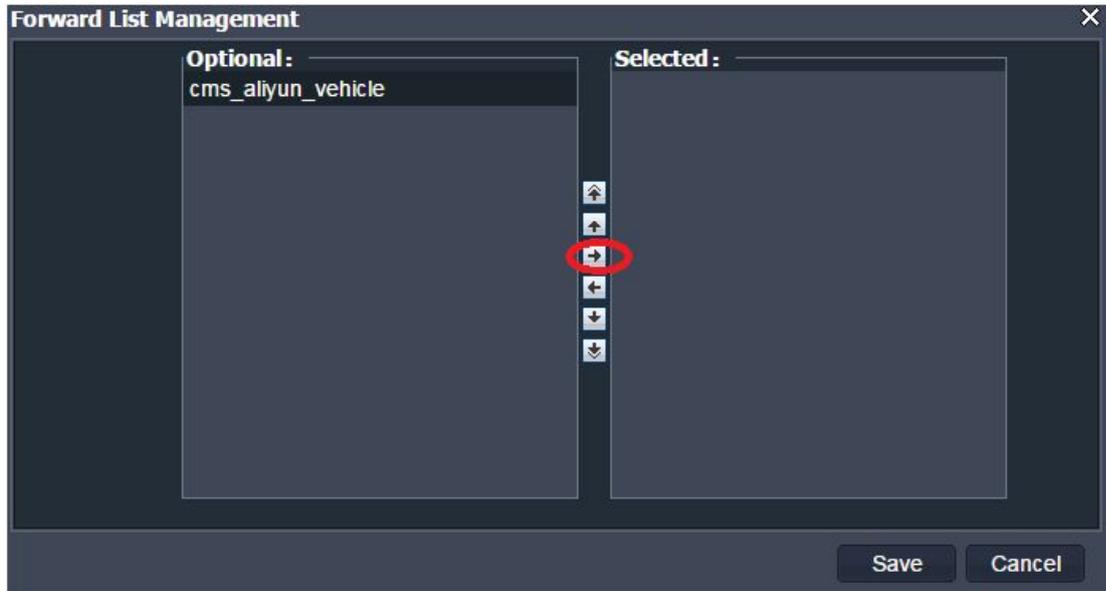

Pic 1-6-10 Filled Content

- 6) Click **【Save】** button to save the configure therefore adding device successful, Pic1-6-11 showed:

Fleed management
